

Dongsheng Zhao

AI Full-Stack Engineer · 9 years

dongshengzhao47@gmail.com · github.com/Blackman99 · dongsheng-blog.netlify.app · Hefei, China · UTC+8

Open to full-time remote or contract. Based UTC+8 — a full European working day overlaps, as does US East in my evening. Working English (CET-6).

Nine years of web and systems engineering, now spent putting LLMs inside production software. I built the AI layer of a crypto compliance platform — Claude and OpenAI drafting regulatory reports and rule sets — along with the multi-chain risk engine beneath it, the public API around it and the Next.js workbench on top, owning design, build, test and cloud deployment end to end. Outside work I created Sveltepress (534★) and write open-source tooling for coding agents; ~714 GitHub stars across 79 public repositories.

EXPERIENCE

AI Full-Stack Engineer · Crypto AML/KYT Compliance SaaS (name on request) Jul 2025 – present

- **LLM-generated regulatory output.** Fed on-chain risk data and rule hits to Claude and OpenAI to draft STR/SAR reports, compliance policies and rule-set proposals, replacing a step previously written by hand.
- **KYA/KYT screening engine.** Designed and implemented multi-hop fund-path tracing that identifies high-risk counterparties, sanctions and blacklist hits, and returns a graded risk verdict.
- **Configurable rule-set system.** Path-level detection routed by scenario — deposit, withdrawal, CDD, ongoing monitoring — so policy changes ship without code changes.
- **Path-investigation rewrite.** Replaced whole-graph upload with server-side detection plus gzipped parallel paging; single-screening latency dropped sharply.
- **Public v2/v3 API.** Async polling with API-key auth, address-monitoring alerts, webhooks and quota billing, over Ethereum, Tron and Base via multiple on-chain data providers and EVM RPC.
- **Compliance workbench.** Next.js 16, React 19 and TypeScript — screening, batch checks, graph exploration, reporting and monitoring, on SWR and Zustand.
- **Platform and delivery.** Led an end-to-end cloud migration; built CI/CD on GitHub Actions with atomic Go binary swaps, layered backups and second-scale rollback; own production incident response.

Frontend Technical Expert · Yiyi Data Technology, Hefei Jun 2024 – Jun 2025

- Planned and led the core of an in-house low-code platform, including a bespoke domain design language; internal delivery efficiency improved by roughly 30%.
- Hardened the platform architecture for stability and extensibility and drove its adoption across internal projects, cutting duplicated work and cost.

Software Development Manager · GE Healthcare China Oct 2023 – May 2024

- Technical management and core feature delivery for the x20 system and the China AW medical imaging platform.

Senior Development Engineer · Bilibili (MissEvan) Oct 2022 – Jul 2023

- Product feature development and frontend platform iteration; maintained the internal component and utility libraries used across the team.

Frontend Engineer · Ouwei Technology, Beijing Aug 2021 – Sep 2022

- Built overseas lending H5 flows, the business back-office and a data aggregation platform supporting a loan book over US\$100M and more than a million registered merchants.
- Cut build time by 50% and doubled dev-server start and HMR speed; production Lighthouse scores 90+ across categories.

Frontend Engineer · AsiaInfo Technologies Sep 2019 – Aug 2021

- Owned stack selection, project scaffolding, core page development and CI; built the shared libraries and components the department standardised on.

OPEN SOURCE

- Sveltepress** · creator and maintainer · sveltepress.site

534★ · since Aug 2022
- Content-first site builder on SvelteKit: SSR/SSG/CSR, Svelte 5 components written directly in Markdown, versioning, i18n, Pagefind search, customisable themes with a default theme, and a fully typed API end to end.
- agent-feishu-channel** · author · TypeScript

48★
- Bridges Claude Code and Codex sessions into a Feishu (Lark) bot — session lifecycle management plus two-way relay of messages and tool calls, so a coding agent can be driven from chat.
- codsh** · author · TypeScript

5★
- Terminal coding agent built on the DeepSeek harness, with its own tool-call loop and interaction design drawing on mainstream agent CLIs.
- Svelte ecosystem components** · author and maintainer

~714★ total · 79 repos
- svelte5plus-calendar — zero-dependency full calendar (month/week/day/year/agenda views, drag and drop, recurring events, i18n, dark mode); svelte-json-discovery — the discovery.js JSON struct view as a standalone Svelte 5 component. Also maintains Casual-UI and headless-wysiwyg.

SKILLS

AI	Production LLM applications (Claude / OpenAI / DeepSeek) · prompting and structured output · tool calling and agent loops · Claude Code and Codex workflow integration
Languages	TypeScript / JavaScript · Go · Rust · Java · Python
Frontend	React 19 / Next.js · Svelte 5 / SvelteKit · Vue 3 · Vite / Rollup / Nx · Tauri desktop and mobile hybrid · D3 / ECharts
Backend	Node.js · Go · PostgreSQL / MySQL · Redis · REST and async job pipelines · LLM integration
Infra	AWS · Tencent Cloud · Docker · GitHub Actions / Jenkins · Linux (Arch / Manjaro) · systemd deployment with rollback
Other	Algorithms and data structures · EVM and Tron on-chain data · English for working meetings (CET-6)

EDUCATION

2014 – 2018 **West Anhui University** — BEng, Electronic and Information Engineering
